Kim Ingerslev named to Technology Association of Iowa Board of Directors

TECHNOLOGY ASSOCIATION OF IOWA NOMINATES WESTERN IOWA TECHNOLOGY LEADER TO HELP DRIVE INDUSTRY GROWTH

November 30, 2005. Kim Ingerslev, President and CEO of Professional Computer Systems, Co. (PCS), has been nominated to the Technology Association of Iowa (TAI) Board of Directors.

“Kim stands out as one of Iowa’s finest technology leaders,” said Wayne Hansen, TAI board chairman and president of CI3. “We welcome his leadership at this exciting time for Iowa’s emerging technology sector.”

As the founder and leader of PCS, Kim brings strategic leadership and technology expertise to the TAI board. Kim is a seasoned business analyst and has been a leader in the utility industry for over 24 years. He is a recognized authority on utility issues in the software industry, and has assisted electric utility companies throughout the United States in the quest for innovative management systems. PCS was recognized by TAI as “**2004 Technology Company of the Year**”.

“Importantly, Kim’s appointment also brings strong representation of Western Iowa’s technology sector to the table,” said Leann Jacobson, TAI president. “His participation will fuel statewide, broad-based growth and prosperity for this critical industry in Iowa.”

Today’s information technology industry in Iowa has over 3,000 companies and 46,000 workers adding \$2.1 billion in wages to the state’s economy. Iowa’s technology industry offers companies that produce high paying jobs and fosters the image of Iowa as a young, energetic high tech state. This is important as other companies and economic development groups in Iowa try to attract the best workforce possible. It also drives economic growth across other industry sectors.

About TAI. TAI is a member-based association driving the success of the tech industry through a network of leadership, connections and promotion. It formed in 1997 through the joint efforts of industry leaders, the Iowa Department of Economic Development and the Governor of Iowa, and was known as the Software Council of Iowa. As scope broadened to include capital formation, training, education and advocacy, it became known as Software and Information Technology of Iowa. Today, TAI has over 230 industry members and works to strengthen Iowa’s technology ecosystem and establish Iowa’s reputation as a state that nurtures the technology industry.
